Automating macOS and iOS

Adam Tow MacAdmins - October 16, 2019

About Adam Tow

- Using Apple products since the Apple][.
- First Mac was an SE/30.
- First laptop was the PowerBook 180.

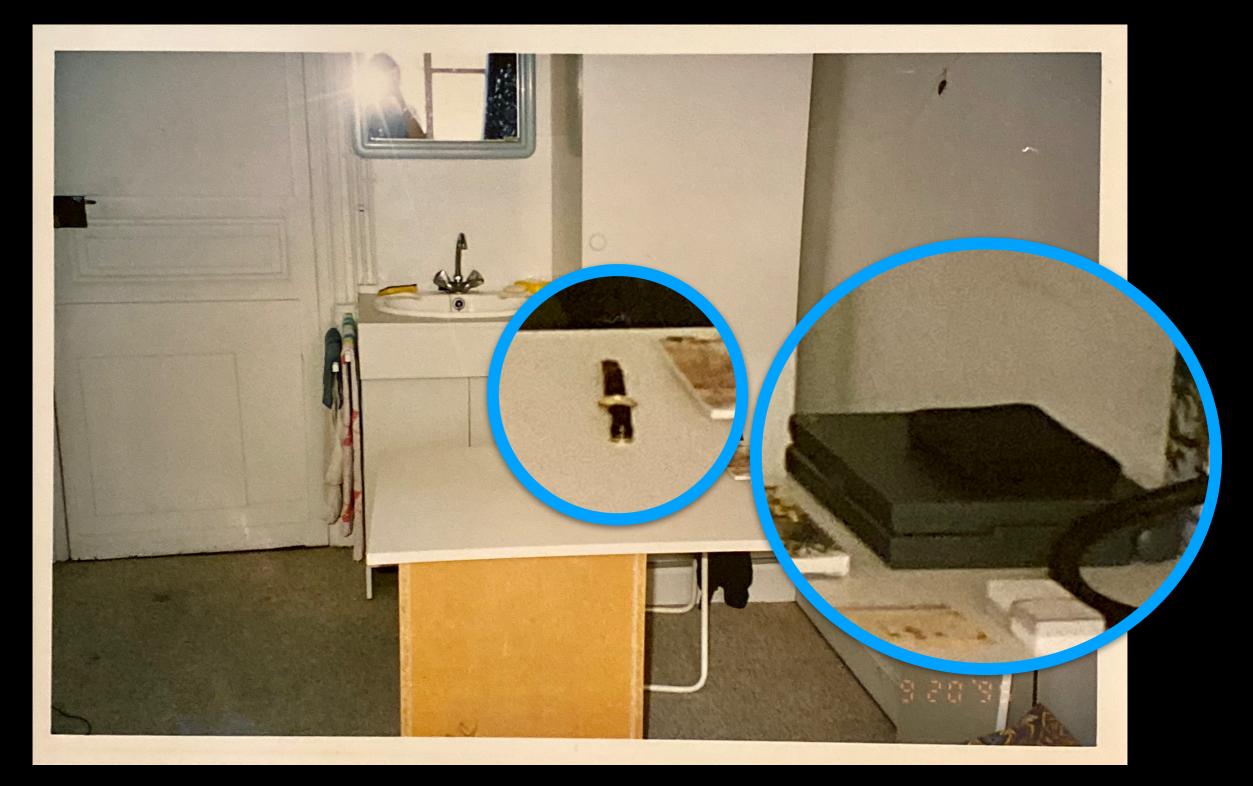

Newton and Mobile Computing

- Got interested in mobile computing with the Newton MessagePad.
- Saw it as the future of computing, in your hand and pocket.
- "Everyone is going to have these one day!"

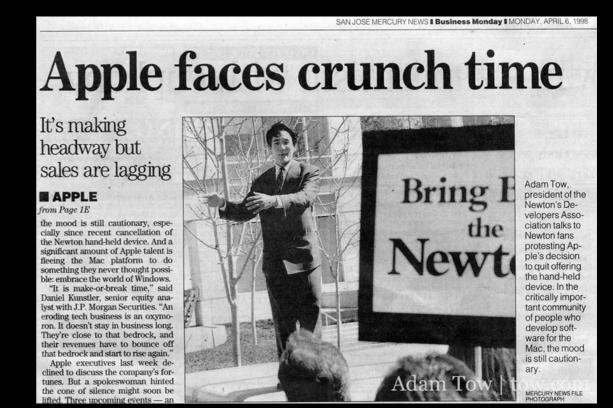

24 Years Ago

Newton Protest / Feb 1998

- Newton was cancelled by Steve Jobs in February, 1998.
- Led the Newton Protest at Apple Infinite Loop campus.
- Tim Cook's first day at Apple!

AllThingsD and D5

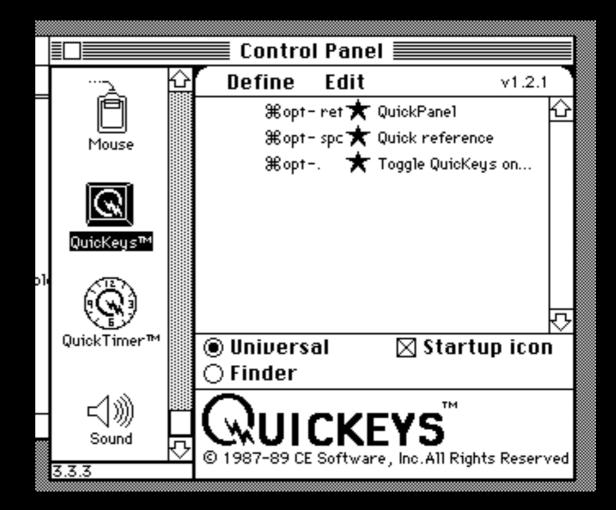

- Built the <u>AllThingsD.com</u> and <u>recode.net</u> websites for Walt Mossberg and Kara Swisher
- Was present at the historic Steve Jobs and Bill Gates interview at **D5** in 2007.
- Currently the Tech Lead for the conferences team at Vox Media.

Automation on the Macintosh

Quickeys

- Made by Donald Brown and CE Software.
- Control Panel for System 6.
- Created macros that simulated key presses and mouse operations.

"...here I am, at like 10:14 typing away on my Mac running SYSTEM 7.0!!!!!! I love it! It is the most awesome piece of software I have seen yet! Just absolutely awesome. However, there are some things that are incompatible with the new current system software, such as Norton Utilities, SUM II, Quickeys, and a couple more. That really sucks since I use all of those applications. **Quickeys** is the one that I will miss the most because I use it just so much of the time."

-Adam Tow, May 18, 1991

"Life without Quickeys is turning bad. Oh well... I can learn to cope."

-Adam Tow, June 20, 1996

Modern Mac Automation

AppleScript

- Introduced in System 7 back in 1993.
- English-like language.
- do shell script
 - Call command-line scripts.
- osascript
 - Call AppleScript scripts.

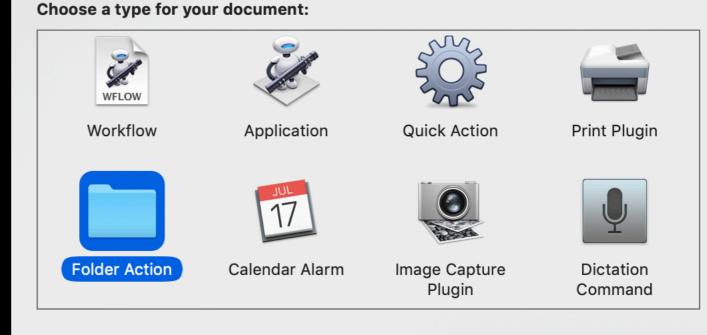

Automator

- Introduced in Mac OS X Tiger (10.4)
- GUI for automating tasks without knowledge or programming or scripting languages.
- Output of previous action becomes input of the next action.

Automator

- Workflow
- Application
- Quick Action
- Print Plugin
- Folder Actions
- Calendar Alarm
- Image Capture Plugin
- Dictation Command

Folder Actions are workflows that are attached to a folder in the Finder. Items added to the folder cause the workflow to run and are used as input to the workflow.

Mac Automation Examples

1. Open Photo Mechanic

- Insert a memory card.
- Launches the Photo Mechanic application.
- Presses Command-G to open the Ingest dialog.

2. Pay Bills

- Streamline the task of paying bills every month.
- Opens Reminders, 1Password, Finder folders.
- Opens Safari and Chrome to all sites.
- Resizes and positions all windows on monitors.
- Hazel script renames and moves statements to correct folders after downloading by inspecting filenames or contents of PDF files.

3. Southwest Check-In

- Asks for a confirmation code, first name, and last name.
- Open Safari to the Southwest website.
- Simulates mouse clicks and keyboard input to check me into my flight.
- Get that A boarding pass!

iOS Automation

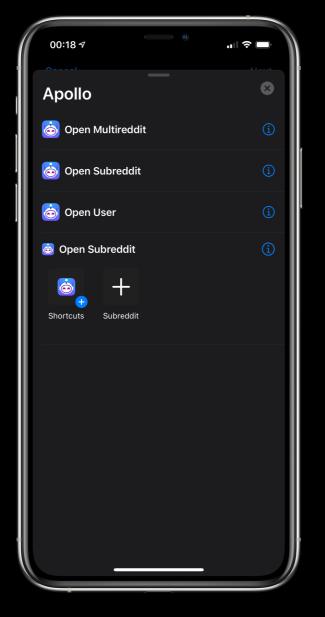

Shortcuts

- Originally developed as Workflow.
- Purchased by Apple in 2017.
- Rebranded as Shortcuts in iOS 12.
- Built-into iOS 13.
 - Installed on all new devices.

Shortcuts

- In Shortcuts for iOS 12, the output of previous action became the input of the next action.
 - Like in Automator.
- In Shortcuts for iOS 13, actions have parameters built-in.
 - The previous action doesn't always become the next action.
 - Moreover, actions are laid out in a natural language manner.

Shortcuts Demo

iOS 13 Personal Automations

- Trigger-based running of shortcuts
- Time
- When Wi-Fi is connected
- When connected to CarPlay
- When an app is opened
- Tap an NFC sticker
 - Requires iPhone Xs, Xs Max, XR, 11, 11 Pro, or 11 Pro Max

Personal Automations Limitations

- Many personal automation still require a tap to run.
 - Time-based
 - Location
 - Wi-Fi
- Some shortcut actions don't run properly when device is locked.
- Can't really use iOS as a mini-server.

iOS 13 Home Automations

- HomeKit status changes
 - Lights turn on, time of day, switches are toggled, etc.
- Limited set of actions available
 - Get Contents of URL
 - Run SSH Command

Will the Last Person to Leave Turn Off the Lights?

00:22 ⋪	s الי ا		00:22 7		.11 🗢 🗖	00:22 7	• •	''I

<u>^</u>	An Accessory is Controlled Ex. "Light Turns On"	>	Time		Any	Good Night		
	A Sensor Detects Something Ex. "Motion Detected" or "Smoke Detected"	>	- Time		Any			
	EX. MOTION Detected of Smoke Detected					Test This Automat	ion	
		ŀ						
						_		

Voice Control

- In iOS 13, Voice Control allows you to control your iOS device with just your voice
- Simulates tapping, swiping and manipulating the screen.
- Can be combined with Shortcuts to perform automations that would otherwise be impossible.

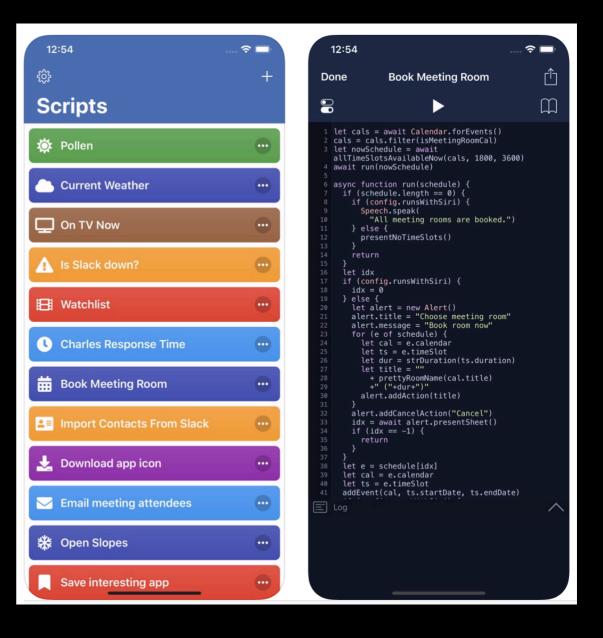

Keyboards, Mice and Accessibility

- Mouse support in iOS 13!
- Can assign commands to mouse buttons
 - Run Shortcut
 - Long Press (e.g. right click)
 - Control Center and Multitasking

Scriptable

- JavaScript automation on iOS.
- Native integration with iOS APIs.
- Can create interfaces and interact with data outside of its own sandbox.

iOS Automation Examples

1. Morning Routine

- Turns on the lights
- Retrieves the weather
- Backs up my shortcuts
- Speaks events and to-dos for today
- Opens Safari to websites I want to read in the morning
- If I ran it once before in the morning, asks me if I want to run it again.

2. Running Workout

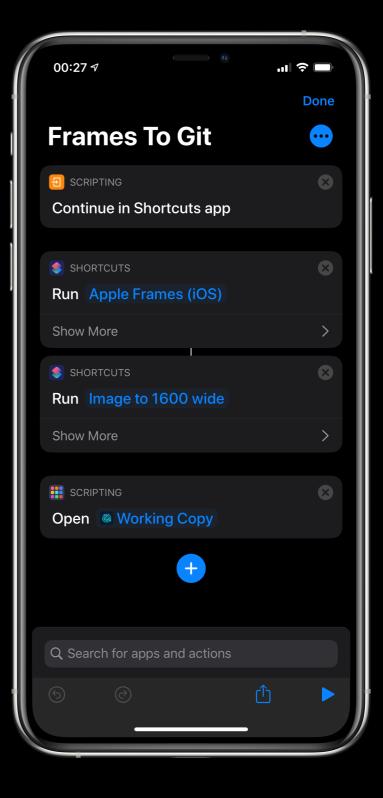

- Opens the Podcasts app.
- Starts a Strava workout.
 - Requires iOS 13.
- Opens Runkeeper.
- Waits until I return to the Shortcuts app before running the next step.

07:38 🕫		•11 LTE 🗩

Q Search		

3. Frames to Git

Apple Frames

- Frederico Vittici from MacStories.
- Takes screenshots and wraps the proper iOS device chrome around them.
- Created my own shortcut that calls resizes the output from Apple Frames before sending to my Git repos.

Mac and iOS Automation Examples

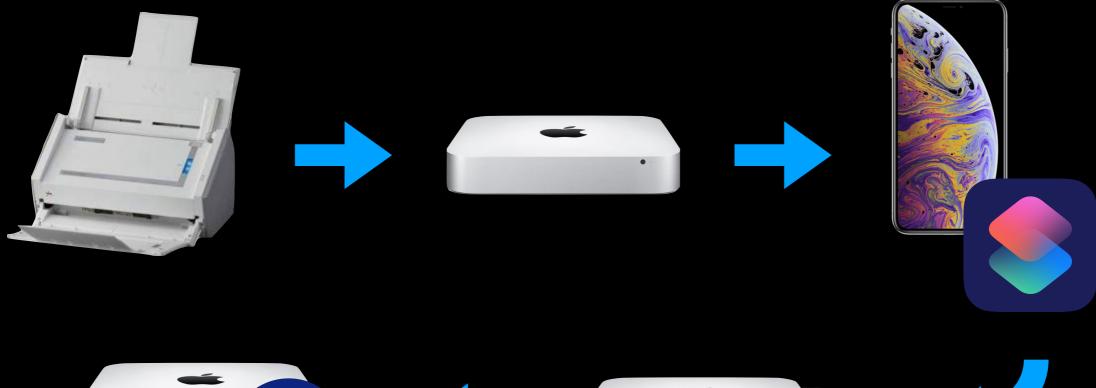

1. Finish Scanning

• iOS Files app or Notes

- Provides native file scanning on iOS.
- Slow when having to scan multiple documents at a time.
- Fujitsu ScanSnap 1500M
 - Great for scanning multiples pages at a time.
 - Software is 32-bit and no longer works on Catalina.
 - Attached to Mac Mini at home.
 - Don't want to use Remote Desktop to have to control it.
 - Goal is to scan multiple pages and tell it when to stop remotely.
 - Rename and save the file automatically to Dropbox.

Finish Scanning Lifecycle

Finish Scanning

• Shortcut

- "Hey Siri, Finish Scanning."
- Calls the KM shell script from iOS using SSH action.
- Keyboard Maestro
 - Clicks the Finish Scanning button.
 - Closes windows in Preview.
 - Triggered by osascript shell command.
- Shortcut
 - Previews the scanned document
 - Renames file on Dropbox.
 - Deletes the original file on Dropbox.

2. Wireless DSLR Photography

Wireless DSLR Workflow

- Shoot with Canon EOS 5D Mark IV
- Supports transferring images using FTP or FTPS using built-in Wi-Fi transmitter.
- Mac mini in the cloud runs FTPS server.
- Hazel, AppleScript, and Exiftool
- Files renamed to final archive name: YYYY-MM-DD_hhmmss_frame4
- Photos added to Photos, Google Photos, Dropbox, and sends me a Message.

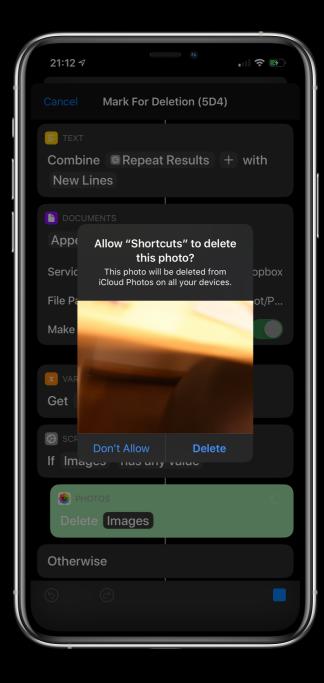

Wireless Photo Demo

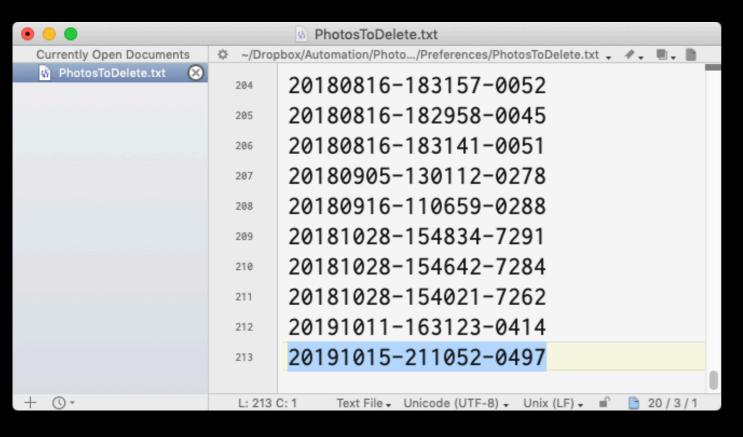

3. Mark Photo for Deletion

- Mark a photo in the iOS Photos app
- Filename of image gets appended to a Dropbox file
- When the RAW image is imported to my Mac, marked images will be moved to a To Delete folder.
- These images are not added to Lightroom.

One More Thing...

- Remember how I said some Personal Automation triggers on iOS 13 require confirmation?
- And how iOS can't act as a mini-server?
- Autocuts, released earlier this week, aims to change that.
 - At least until iOS 14 when they Sherlock Autocuts!

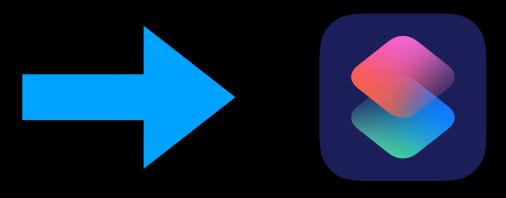

- Autocuts is a background shortcut manager for iOS 13.
- Launched via the Open App personal automation.
- Runs shortcuts automatically in the background while you use your iOS device.

- Enables auto-running of time, location, and Wi-Fi triggers.
- Integrates with IFTTT, Zapier, or other web integration service with your iOS device.
- Shows what could be possible if iOS was able to act more like an always on server.
