NoMAD Introduction – By Joel Rennich, GM Trusource Labs

An introduction to NoMAD, a menu bar application which can help you get all of the functionality of binding to AD without actually doing the bind! Learn how NoMAD works in both bound and unbound environments, what additional functionality it can bring to your organization and how you can easily deploy and manage it.

The screenshot shows the Jamf Connect website. At the top, there is a navigation bar with the Jamf logo, links for Products, Solutions, Contact, and Jamf Nation, a search icon, a Log In button, and a Start Trial button. Below the navigation bar, there is a hero section with a background image of a laptop keyboard. The hero section contains the text "Streamline Mac authentication and account management." and "Simplify the user experience while eliminating support challenges for IT". Below the hero section, there is a section titled "Create one Mac account. Sign in once." with the Jamf Connect logo. Below this, there is a paragraph of text: "Today, there is strong desire to eliminate the need to bind a Mac to Active Directory, but maintain account security. Jamf recently acquired, NoMAD, now Jamf Connect, to make this process seamless. With Jamf Connect (formerly NoMAD), an end user can unbox their Mac, power it on and access all of their corporate applications after signing on with a single set of credentials." Below the paragraph, there are two circular icons: a blue circle with a person icon and a circular arrow, labeled "Sign on", and a green circle with a padlock icon and a circular arrow, labeled "Sync". Below the "Sign on" icon, there is text: "One Mac username and password to rule them all. Ensure you create a wonderful Mac experience for". Below the "Sync" icon, there is text: "Make Mac usernames and passwords talk. Keep account credentials in sync between your identity".

Today, there is strong desire to eliminate the need to bind a Mac to Active Directory, but maintain account security. Jamf recently acquired, NoMAD, now Jamf Connect, to make this process seamless. With Jamf Connect (formerly NoMAD), an end user can unbox their Mac, power it on and access all of their corporate applications after signing on with a single set of credentials.
